

Go Green!

SafePath™ Products was the first to offer “green” transition treatments for athletic sport courts. The CourtEdge™ Reducer is designed for portable and permanently installed raised wood sport courts. CourtEdge™ Reducers are specifically fabricated to provide solutions for inverted landings, built-up landing transitions, floor wraps and vertical rises at door entrances and at raised court floor edges.

SAFEPATH

PRODUCTS

Safety & Access

The only product prefabricated for the architectural sport court industry, CourtEdge™ Reducers offer hundreds of design and height configurations for complying with federal, state and local access building code laws and regulations. SafePath™ employs a design team of full service professionals to create your complete solution for transition fabrication for your sport floor project. Whether it is an inverted landing or a raised court surface, CourtEdge Reducers offer safe, durable, solid and solid attractive solutions for almost any floor

Durability

CourtEdge™ Reducers are designed to be affixed to the vertical sides of hydroscopic flooring systems allowing for expansion and contraction of substrate flooring material. Our products are easy to install and can be cut in the field. These transitions have no load weight bearing limitations. Whether it's interior or exterior, CourtEdge™ Reducers will never freeze, crack or splinter like other flooring transition products and never require the use of mechanical fasteners.

Versatility & Ease of Installation

Our SafePath™ design team carefully lays out each order according to customer specifications before shipment. These designs are specific to each floor project and allows for error-free on-site installation that is quick and easy. CourtEdge™ Reducers are installed with a high-grade silicone adhesive and are designed to be affixed to the substrate or vertical sides of hydroscopic flooring systems. Temporary applications are also available.
