

Subfloor Blocking

Subfloor blocking is additional support to prevent deflection of subfloor systems from loading imposed by bleacher systems, portable backstops, thresholds, etc.

The Maple Flooring Manufacturers Association (MFMA) recognizes the need to incorporate specialized subfloor blocking into many sports flooring systems manufactured by MFMA Mill Manufacturing members. There are however, far too many system configurations for the MFMA to develop a uniform specification covering all aspects of floor system blocking under heavy load locations. Therefore, MFMA refers all inquiries concerning subfloor blocking to the supplier/manufacturer of the flooring system in question.

If you have any additional questions, please contact MFMA's Technical Director at 888/480-9138.
